

SCHROEDER GREEN INNOVATION

Quality and reliability

Schroeder Green Innovation is a German medium-sized family business. With a flat hierarchy, we are close to our customers and act flexibly and pragmatically.

OUR SERVICES

Technical consulting

Support regarding function and installation by our own product specialists in the different markets

Market and customer support

Own international sales team with multilingual contact persons (German, English, Spanish, Portuguese, French, Russian, Ukrainian, Romanian, etc.)

Organization and implementation

Global technical training events in various languages

Further advantages of the SGI filter:

- Increase in torque and engine power
- Protection of the exhaust gas recirculation valve (EGR valve) from premature contamination
- Simple, fast and uncomplicated installation
- No TÜV acceptance and registration in the vehicle documents necessary
- Extension of the service life of the engine and exhaust system
- Completely maintenance-free when properly installed
- Very long service life of the SGI filter
- Flexible use
- High economic efficiency

„Nothing in the world is as powerful as an idea, whose time has come.“
Victor Hugo

SCHROEDER GREEN INNOVATION

MOBILITY & ENVIRONMENTAL PROTECTION

**With the SGI filter
reduce pollutants
and save fuel**

SCHROEDER GREEN INNOVATION

The time is ripe - for a new innovative technology

SGI filter – the innovative solution

The SGI filter is a device that can be retro-fitted in all vehicles and aggregates with petrol and diesel engines as well as in oil heating systems.

The SGI filter intervenes before combustion and improves it. This innovative solution thus overtakes the current state of the technology.

SGI filter – the win-win-technology

This makes the combustion process

- more environmentally friendly
- more powerful
- more efficient

Also, the soot particles burn off almost completely

Mobility & environmental protection

SGI filter – pollutant reducer and fuel saver

The SGI filter solves several problems and meets several needs at the same time:

Fuel saving

- Average reduction of fuel consumption by approx. 10-20%, for both gasoline and diesel engines

Significant improvement of exhaust gases

- Reduction of carbon monoxide (CO) up to 97.7%
- Reduction of fine dust and soot particles by 80% and more
- Reduction of hydrocarbons by approx. 30%
- Reduction of nitrogen oxide emissions by up to 10%
- Reduction of CO₂ emissions by approx. 10-20%

We work together with our authorized contract workshops worldwide

Application areas of the fuel modifier

Passenger cars

Trucks

Buses

Vans

Motorcycles

Agriculture

Construction & Road Building

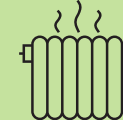

Mines & Mining

Rail transport

Shipping

Heating systems

Generators

Significantly reduced soot load of the exhaust gas recirculation valve (EGR-Valve)
